Patent Kind Lan Pg Filing Notes Application Patent
JP 60208909 A 10

Abstract (Basic): JP 60208909 A

Compsn. comprises (A) 100 wt. pts. resin mixt. of (a) 80-99.5 pts. wt. aliphatic polyamide resin, and (b) 20-0.5 wt. pts. copolymer resin contg. maleic acid (anhydride), monoalkyl maleate and/or dialkyl maleate; (B) 0.1-600 pts. wt. antiinflammatory and analgesic active ingredient; (C) 0.1-600 pts. wt. polyhydric alcohol and/or its deriv.; and (D) 200-1900 pts. wt. lower alcohol contg. 0-50 wt. % water.

Copolymer (b) is e.g. methylvinylether maleic acid (anhydride) copolymer, methylvinylether monoalkyl maleate and/or dialkyl maleate copolymer, styrene-maleic acid (anhydride) copolymer, styrene-monoalkyl maleate and/or dialkyl maleate copolymer, or isobutylene-maleic acid (anhydride) copolymer.

USE/ADVANTAGE - Pharmaceutical ingredient-releasability and absorbability of ingredient from skin are improved. When applied to skin, no injury occurs.

Patent Kind Lan Pg Filing Notes Application Patent
JP 58167510 A 8

Abstract (Basic): **JP 58167510 A**

Cataplasm contg. indomethacin, which is stable and has excellent discharging efficiency, is described (characterised by the following). A nonionic surface active agent is added to a base contg. 0.1-1.5wt. % indomethacin, that a pH-adjusting agent is added thereto, and that the entire cataplasm is adjusted to pH 4.5-6.5. The nonionic surface active agent is at least one kind of polysorbate 80, sucrose fatty acid ester of polyoxyethylene castor oil. The pH-adjusting agent is at least one kind of acrylic acid polymer and methoxyethylene-maleic acid anhydride copolymer. The content of nonionic surface active agent is 0.05-5.0wt. % with respect to the entire base.

Indomethacin is a non-steroid type antiinflammatory agent and anodyne. When administered orally, however, it produces a side effect of troubles in digestive tracts, i.e., digestional ulcer, etc., although it has an excellent medicinal effect through absorption by digestive tracts. To alleviate such a side effect, examinations have been conducted of indomethacin as an external application, including

plaster cream agent and cataplasm. With respect to cataplasm, however, it has been such that indomethacin decomposes with time, and the efficiency of discharging indomethacin from the base was not necessarily good. As a result, the desired treatment effect has not been obtd. under the circumstances.

JP 61275212

Abstract (Basic): JP 61275212 A

Cataplasm contains ketoprofen as an active substance. An ointment comprises a thickener, a polyhydric alcohol, a solubilising agent, water and stabiliser.

Prefd. thickener contains sodium polyacrylate, gelatin, polyvinyl alcohol and copolymer of methylvinylether and maleic acid anhydride in prefd. proportion to cataplasm 2-5 wt.%, 2-6 wt.%, 2-5 wt.% and 1-4 wt.%, respectively. Pref. polyhydric alcohol is the one of glycerin, propylene glycol, sorbitol, ethylene glycol, diethylene glycol, polyethylene glycol, polypropylene glycol and 1,3-butylene glycol. Pref. proportion of the cataplasm is 20-30%. Pref. proportion of the solubilising agent, water, stabiliser and ketoprofen is 0.2-6 wt.%, 40-60 wt.%, 0.1-5 wt.% and 0.2-3 wt.%. Prefd. pH value of the cataplasm is 5-6.5. Opt. cataplasm contains filling materials, pH adjusting agents, antiseptics, pharmaceutical aids, antioxidants, emulsifiers, crosslinking agents or absorbifacients.
